

NEW!

Against the pollution of natural and urban spaces

What do you think about the cleanliness of your city?

- Each year in France, nearly 80 billion cigarette ends go into the sewer: enough to cover the surface of more than 2,000 football fields.
- A cigarette butt alone pollutes 500 liters of water.
- Every day, humans release 2.7 trillion liters of wastewater.
- In 1995, cigarette production generated 2.3 million tonnes of waste, of which 209,000 tonnes were in chemical form!
- 30,000 hectares of forests go up in smoke each year: in 55% of cases, the cigarette butt is involved.

Let's react!

.com

ecoclope

No longer throw our cigarettes in the wild.

ecoclope is a supply of cigarettes:

- economical: storage of opened cigarettes
